

Antireflective Glass LUXAR®

A new dimension for Antireflective Glass

LUXAR glass with almost no reflectance, is a new product of Glas Trösch. With a reflection of less than 0,5%, mirror-like effects will be prohibited with LUXAR magnetron sputtered antireflective glass. Therefore LUXAR is almost invisible.

LUXAR is used for applications where a partition is needed, but should be invisible:

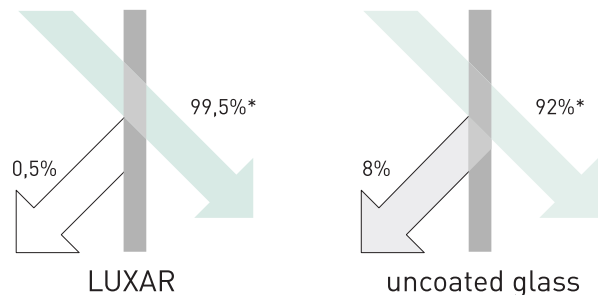

- Facades
- Storefronts
- Information displays
- Picture frames
- Video walls
- Control & surveillance rooms
- Vitrines & showcases
- Display cases

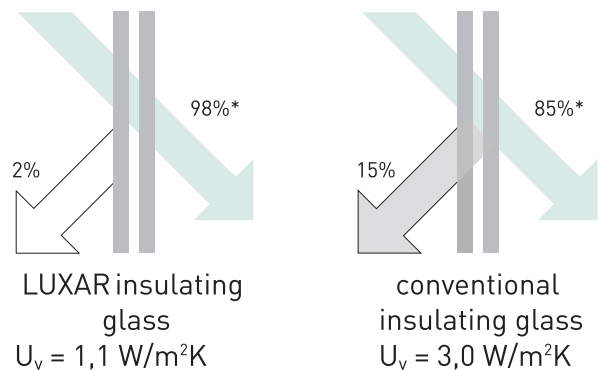

Presented by

LUXAR at a glance

- Antireflective glass by magnetron sputtering technology
- No more light reflections or mirrorlike effects
- Minimum % reflection
- Increase in light transmission of more than 10% for double glazing
- No color distortions in transmission
- Available on regular float, extra clear & tinted float glass
- Single glazing with double side coating:
Reflection 0,5%
- Double glazing: Reflection 1% (all surfaces coated)
- Durable & hard coating
- Can be post tempered, laminated, curved
- Can be silkscreen printed
- Double glazing A/R with neutral Low E coating
SILVERSTAR 1.1N, Reflection 2%
- Coating Design: durable multi-layer coating by magnetron sputtering – performs like hardcoating
